Jorlin Yang 杨卓霖

thedaosheng.github.io
github.com/thedaosheng · Beijing, China

Robotics founder building the human-in-the-loop layer for embodied AI. Built 20+ robots as an undergrad; started two profitable robotics-education businesses before founding Faber.

FOUNDER

Faber (仓颉具身) — Founder & CEO Beijing · Apr 2026 – Present

Teleoperation cockpit where humans take over field robots with force feedback; every takeover becomes post-training data.
demos →

- Built whole-body intuitive teleop (waist, shoulders and mobile base move together; manipulate while driving); ported across **3 robot platforms** (Luna → Ultra → Reflex Robotics).
- Halved the human-to-robot time ratio on a parcel-packing task, from **1:10 to 1:5**.
- Achieved stable remote force-feedback teleop under **200 ms** emulated latency (≈ Beijing–Washington, D.C.), with online correction during policy rollouts.
- Designed a bio-inspired fingertip tactile display combining normal force, shear force and **50–300 Hz** vibrotactile texture, so operators feel hard-to-soft material transitions.
- Pilot interest from US grocery chain **Grocery Outlet** and two other retail / food operators; team of 5.

Robotics Study-Tour Curriculum Kit — Founder Beijing · Feb 2025 – Sep 2025

- Designed a hardware + curriculum kit in which kids build a wall-climbing robot in **2 days**; wrote and tuned the embedded software for every robot.
- Ran the flagship class with a 14-person team (2 core engineers + volunteers) at **~31% profit margin**.
- Mass-produced the kit and licensed the SOP to institutions in **Beijing, Shanghai and Shenzhen**, which ran their own summer camps on it.

K-12 Robotics Competition Coaching — Founder Beijing · 2023 – 2025

- Licensed the competition-training program to **5 Beijing institutions**, generating **RMB 1M+** revenue for partners.
- Coached a student to **First Prize, Beijing Youth Science & Technology Competition (High School)**, one of 5 awarded city-wide.

EXPERIENCE

Shenzhen Institute of AI and Robotics for Society (AIRS, CUHK-Shenzhen) Oct 2024

Robotics Intern — teleoperated data collection for a whiteboard-wiping task; saw first-hand why bad demonstrations produce bad policies (the origin of Faber).

ForwardX Robotics (灵动科技) Aug 2024

Product Manager Intern — tore down an EU-bound AMR into a full BOM; worked on an EU-bound EV charger product.

Shenzhen X-Institute (Prof. Zexiang Li) 2023 – 2024

Product Lead — defined a knee hot/cold-compress rehabilitation device.

Songshan Lake Robotics Institute, Dongguan 2022 – 2023

Product Manager — led a painless breast pump project; secured an RMB 500K investment letter of intent.

COMPETITIONS & BUILDING

- **RoboMaster University Technical Challenge — National First Prize** (Top 8 of 400+ teams), 2024. Embedded / Controls Lead for the Engineer and Dart robots.
- Built **20+ robots** in undergrad: aerial, ground, wall-climbing, and an all-in-one badminton robot that picks up, stores and serves shuttlecocks. gallery →

EDUCATION

Beijing Institute of Technology — M.S., Key Laboratory of Biomimetic Robots and Systems (MoE) 2025 – Present

University of Science and Technology Beijing — B.Eng., Robotics Engineering 2021 – 2025

SKILLS

Embedded C/C++ · ROS 2 · Python · Swift / visionOS · CAN motor control · force-feedback teleoperation · WebRTC / LiveKit · NVIDIA Jetson · mechatronic product definition & BOM
